

Archaeological Field School In Rebun Island, Hokkaido, Japan

Excavation at Multi-layered Shell-midden site

(1st August -21st August, 2016)

Hokkaido University will hold the International Field School at Hamanaka 2 site on Rebun Island in this summer. Specialists in various fields gather for this Field School and you would learn the newest investigative technique, the notes of research analysis, etc at Multi-layered shell midden site (from Jomon to Historical Ainu). This event would give a chance to debate discovery of a new subject or selection of a research theme through exchange of the students participating from different countries.

We would like to discuss on how we can utilize a historical cultural heritage as resources for the local community. And also the result of the investigation is expected to impact on solving the formation process of the Ainu culture.

Discussion on the international subject about preservation and practical use of an indigenous-people's historical cultural heritage with the global point of view is one of the principal use of an indigenous-people's historical cultural heritage with the global point of view is one of the principal pillars for this project.
